EXPORT SUMMARY

Fiscal year 1987 horticultural product exports were up 19 percent over fiscal year 1986 with shipments in every month out pacing the corresponding month in 1986. U.S. exports to offshore destinations (destinations other than Canada*) for September 1987, the last month of the fiscal year, were $234 million, up 56 percent over September 1986. These sales bring total horticultural product exports for fiscal year 1987 to $2,472 million. The phenomenal September export growth was led by the resurgence in sales of almonds and walnuts, both of which were approximately 150 percent higher than in September 1986. These increased exports are due to record crops in the United States for both nuts with a corresponding drop in U.S. prices and efforts by European importers to refill their hoppers after the short 1986 crops. Other commodities with substantially higher exports for September 1987, are fresh grapes, apples, and raisins. (Summary continued on Page 2.)

(* Canada is excluded because U.S. export data to Canadian destinations are not accurate. Many export shipments to Canada are not counted.)

For further information on items in this circular, contact the Horticultural and Tropical Products Division, (202) 447-6590. All measures not otherwise noted are metric. One kilogram (kg) = 2.2046 lbs., 1 metric ton = 2,204.62 lbs., 1 liter = 0.2642 gallon, 1 hectoliter = 26.42 gallons, 1 hectare (ha) = 2.471 acres.

Approved by the World Agricultural Outlook Board – USDA

SUMMARY

Increased apple exports are the result of poor crops in the Scandinavian countries, increasing demand for imports there, and tremendous growth in sales to Taiwan and the rest of the Far East. Grape sales also were boosted by substantial improvement in sales to Taiwan. Fiscal year 1987 export gains were led by increased sales of cherries, avocados, grapefruit, frozen french fries, beer, wine and citrus juice concentrate. Sales to the European Community and Japan in fiscal year 1987 each were up by 28 percent compared with 1986.

UPDATE

General Developments

--In the second year of the U.S.-Israel Free-Trade Area Agreement, September 1986-August 1987, U.S. imports of horticultural products from Israel fell 18 percent to $44 million. U.S. exports of horticultural products to Israel advanced 47 percent to $13.6 million. Declines in U.S. imports from Israel cut across most commodity groups. Canned and chilled citrus segments--mostly grapefruit--and frozen baby carrots were among the few major items showing import growth. The improved competitive position of Israeli products in European markets--due to the lower value of the dollar, to which the Israeli shekel is aligned--helped to provoke Israel's poorer performance in the U.S. market during the past year.

Much of the increase in U.S. exports to Israel also can be traced to Israel's exports to Europe. A substantial portion of Israel's horticultural product imports from the United States, including virtually all of the citrus juice, is further processed and/or blended with Israeli products for re-export to Europe.

--The Government of Finland has lowered import duties on apples, pears, oranges, and mandarins, in advance of the normal schedule for reducing these seasonal tariffs. New levels and effective dates for these duties, which will be in effect through the current marketing year, are as follows:

	Old Rate	New Rate	Effective
Apples	50%	6.0%	11-14-87
Pears	40%	3.2%	10-21-87
Oranges	40%	7.7%	01-01-88
Mandarins	12%	5.1%	11-15-87

--Torrential rains have severely damaged citrus and vegetable crops in the Spanish regions of Valencia and Murcia. The November 3-5 storm caused flooding in major citrus and vegetable producing areas. The agricultural infrastructure (mainly irrigation canals, ditches, and roads) of both regions, were severely damaged. Vegetable crops such as peppers, tomatoes, iceberg lettuce, broccoli, cabbage and cut flowers were decimated. Considerable damage is reported to the standing citrus crop as many orchards were flooded for as much as 72 hours with the water practically reaching treetops. Oranges followed by satsumas and lemons were the most severely affected citrus crops.

Citrus & Products

--Brazilian production of frozen concentrated orange juice (FCOJ) during the current 1987 processing season now is estimated at 765,000 metric tons at 65 degrees brix (263.8 million gallons at 42.8 degrees brix), 35,000 tons below USDA's previous estimate. The lower juice output is in response to less plentiful fruit supplies than initially anticipated. Estimated orange production in the important State of Sao Paulo has been revised downward by 10 million boxes (40.8 kilos) to 230 million boxes. Below normal rainfall during the July-September period together with wide temperature fluctuations and poor grove maintenance by some farmers--resulting from dissatisfaction over prices received for the previous season's fruit--are responsible for the smaller harvest.

As of mid-November, nearly two-thirds of Sao Paulo's orange crop had been harvested. At the current pace, harvesting activity will continue into February, compared with a normal completion date of December 31. Processing activity in recent weeks has picked up compared to September and October's sluggish pace because of this year's late maturing crop.

Brazilian exports of FCOJ during the 1987/88 season (July-June) are not expected to exceed 760,000 tons. While the Brazilian Government does not at the present time impose an official minimum export price for FCOJ, an understanding exists between industry and Cacex officials that no export sales will be made below the "reference price", which is based on the level of the FCOJ futures market in New York. The reference price was raised to $1,345 per ton, f.o.b. port of exit, effective November 6. Reportedly, the reference price was raised to $1,370, effective November 10 and again to $1,445 in mid-November. Actual sales prices for shipment to the United States were increased from $1,425-$1,450 per ton f.o.b. Santos, Brazil to $1,525-$1,550 per ton in mid-November.

A 25-year time series detailing Brazilian exports of FCOJ by destination is presented in the statistical section of this circular. A second table details supply and demand elements for oranges and orange juice over the same time period.

--China's citrus production in 1987 is estimated at a record 2.65 million tons, up four percent over a year earlier, according to the U.S. Agricultural Counselor in Bejing. China's citrus crop has more than tripled since 1982 and could triple again by the year 2000. At present, roughly 60 percent of China's citrus acreage consists of young, non-bearing trees, with the yields for much of the remaining 40 percent still rising as these trees reach maturity. Nearly 95 percent of China's citrus crop consists of Mandarin varieties (tangerine type fruit) and oranges. Cultivation of navel and Valencia varieties is expanding in response to China's efforts to promote export sales. A featured article on the Chinese citrus industry can be found in the August 1987, issue of the Horticultural Products Review Circular.

Fresh Non-Citrus Fruit

--**CORRECTION**--The apple production, supply and utilization figures for the United States, shown on page 19 of the October 1987 Horticultural Products Review, was incorrect. The corrected data are in the statistical section.

--A violent windstorm destroyed some 300,000 fruit trees as it ripped through southern England last month. An estimated 500,000 additional apple, pear, and plum trees were seriously damaged. Though most of the crop had been harvested, the storm blew an estimated 14,500 metric tons of fruit off the trees and damaged it. Widespread electricity failures hit cold storage units throughout the area, damaging some 8,500 tons of deciduous fruit stored there. Many growers, facing total ruin from the storm, are petitioning the British Government for financial aid. The U.K. apple production forecast prior to the storm stood at 318,000 metric tons, up 2.1 percent from last year.

--U.S. fresh cherry exports through August of 1987 are double last year's total thanks mainly to a tripling in exports to Japan. This year's cherry exports will break the 24,000 metric ton mark compared to 11,464 tons exported last year. Despite some quality problems (see August 1987 Horticultural Products Review), Japan imported close to 12,000 tons of fresh cherries this year compared to just under 4,000 tons in 1986. Japan for the first time opened its borders to California cherries--May 25 through June 7--while maintaining its normal import period beginning July 1, for Oregon and Washington Cherries.

Other large cherry buyers this year include Canada (6,000 tons), Hong Kong (2,000 tons) and the United Kingdom (1,600 tons). Exports to Taiwan are up over 200 percent to 360 tons. Unlike the problems encountered in Japan, there were few complaints about cherries shipped by boat to Taiwan, and prices remained firm. The weakening dollar is credited with much of the boost in sales to Pacific Rim nations.

--China's apple production is forecast at a record high 3.7 to 4.0 million metric tons, according to the U.S. Agricultural Counselor in Beijing. The previous record for China's apple output totaled 3.614 million tons. The increased harvest size reflects the expanded apple tree acreage in China and a widespread use of improved apple varieties.

--November 5, 1987 marked the opening date for pear exports to Sweden. The open season will continue until June 30, 1988. Import licenses for pears are not required during this period.

--U.S. pear exports to Norway will be up this year according to the U.S Agricultural Counselor there. Anjou and other pear varieties are selling well. Leading importers have ordered quantities for the pre-Christmas trade equal to those of the entire 1986/1987 season. The Norwegian pear import season opened November 9, 1987, and will remain open until August 10, 1988.

Dried Fruit & Nuts

--The Greek Ministry of Commerce has banned, at least temporarily, all almond imports. The ban, announced as a verbal order on November 6, 1987, halted the issuance of import permits for almonds by the Bank of Greece. The length of time to be covered by the ban was not specified. The order is in response to the inability of Greek producers to compete with lower priced U.S. and Spanish imports.

Greek importers have been purchasing record quantities of almonds to meet a shortfall in supplies caused by a severe storm which swept through Greece in March 1987, damaging almond trees during the bloom. The ban will drive up prices on the Greek market to a level at which producers may be able to sell their small crops at a profit. Greece has imported 3,000 metric tons of almonds since the beginning of the U.S. marketing year in July. Spain has provided 1,000 tons of these almonds while the United States has accounted for the remainder. Imports were anticipated to reach as high as 6,000 tons by the end of the marketing year in June 1988, with 90 percent originating in the United States.

--Australia will impose a 2-percent import duty on walnuts effective January 1, 1988. The increase from a zero duty level results from Australia's adoption of the Harmonized Tariff System. A number of other commodities will have their import duty raised as well. Information on the specific commodities to be covered will be provided as soon as it is available.

Other Processed Fruit

--Estimates for Iberian tomato products production for 1987/88 have been reduced from those previously published (Horticultural Products Review, July 1987, pp. 22,23) due to adverse weather conditions. In Spain canned peeled tomato production is down 30 percent from the July estimate, for a total supply, including carryin stocks of 195,100 metric tons. Export estimates, however, remain the same as domestic distribution has taken the brunt of the reduction. The Spanish tomato paste production estimate of 57,800 tons is 23 percent less than that reported in July. In the case of tomato paste the export estimate is down about 36 percent from the earlier estimate.

In Portugal the estimate of tomato paste production has been reduced 17 percent from that published in July due to hotter than normal weather in July and excessive rain in late August and early September. This reduction, coupled with a reduced estimate of beginning stocks, results in a 1987/88 total supply of Portuguese tomato paste of 105,000 metric tons, 27 percent less than 1986/87.

Since July the EC charges on the export of Portuguese tomato paste--known as Accession Compensatory Amounts (ACA)--have been suspended. These charges were initially levied in July, 1986 in an effort to offset the lower Portuguese costs in relation to costs of other EC members. Under the July arrangements an ACA will be charged only if there is concrete evidence that Portuguese exports are distorting competition with other EC exporters. Since traditional Portuguese export markets are different from those of the rest of the EC, there has been no evidence of market distortion and the ACA remains suspended.

Vegetables

--The Government of Finland temporarily will discontinue customs duties for processing vegetables and root crops (not including potatoes) retroactively from October 1 to December 31, 1987. Domestic shortages of these products and concern over higher prices prompted the action. Varietal preferences and size requirements for processing vegetables are as follows.

Potatoes: Saturna or Bintje varieties are preferred but any other variety suitable for french fries production is of interest. Processors desire a tuber size of 50-70 millimeters and dry matter of over 21 percent. Chipping potatoes are not needed.

Carrots: individual weight should be over 200 grams (Dutch exporters use a range of 200-400 grams, which is accepted by Finns). Indicative price per kg. cif Finnish harbor, is 1 finmark for carrots. The rate of exchange as of October 27, was 4.29 finmarks per dollar.

Cabbage: The Connecticut field variety of cabbage is known. The preferred size is 1.5-3.0 kg. per head.

Yellow Onions: should be as large as possible and round shaped.

Effective October 1, import licenses without quantity limitations have been issued for summer pumpkins, green beans, leaf cabbage, turnip-cabbage (kohlrabi), and cucumbers. As of October 23 licenses without quantity limitations also have been issued for tomatoes.

Finnish importers are seeking quotations and samples from U.S. exporters and shippers, especially for processing vegetables. For names and addresses of importers in Finland, contact Tom Buhler, Horticultural & Tropical Products Division, Foreign Agriculture Service, at (202) 382-8911.

Beer, Wine, & Hops

--The Government of South Korea lifted the ban on imports of grape must and relaxed the restrictions on wine imports on October 1, 1987. This action was taken to allow domestic wineries to expand production and to meet the sharply rising demand for wine. Although imports will be subject to a 100-percent ad valorem duty, this action will at least enable U.S. exporters to gain a foothold in this rapidly expanding alcoholic beverage market. It is presumed that the Government will announce an annual import quota for grape must on the basis of domestic output and that the import procedure will be structured to avoid competition with domestic production.

Previously, wine imports were allowed only for use in hotels and in commissaries exclusively for foreigners. The United States supplied only about 5 percent of 1986 imports, valued at $798,000. Wine imports will now be available for general consumption, but will be subject to quotas until 1991. Quotas for 1987 will be 10 percent of 1986 domestic consumption (about 386,000 liters or 102,000 gallons), rising to 20 percent of 1987 consumption in 1988, 30 percent of 1988 consumption in 1989, and 40 percent of 1989 consumption in 1990. Only pure grape wine imports will be permitted, while wine coolers and non-grape based wines will continue to be banned.

--Italian wine production for 1987 is estimated at 71 million hectoliters (1.9 billion gallons), 3.4 percent below a year earlier, but quality is expected to be very good. Wine grape production was placed at 9.65 million tons, off 2 percent from 1986, because of a cool spring and sparse summer rainfall. Italy's wine exports in 1986 rose 5 percent to $845 million, but shipments to the United States declined 16 percent to $231 million. Exports during January-June 1987 are trailing shipments during the corresponding 1986 period by 2.5 percent and sales to the United States are down by more than 17 percent.

--Hong Kong wine imports were up 7 percent in the first half of 1987. France and Australia, with 59 percent and 10 percent, respectively, of total grape wine imports, are the largest suppliers to the Hong Kong market. However, the United States share of the import market increased from 5 to 7 percent. In this market, it is generally accepted that U.S. wines mainly compete with Australian wines. U.S. market share gains this year have been largely at the expense of the Australians.

U.S.-MEXICO FRAMEWORK AGREEMENT

Framework Agreement

On November 6, 1987, the United States and Mexico signed an understanding concerning a framework of principles and procedures for consultations regarding trade and investment relations. This "framework agreement" commits each side to agree, on request, to consultations on any trade or investment issue. The goal is to make consultations between the two trading partners routine and non-political. The agreement does not contain trade concessions by either side. It is not a free-trade agreement, nor does it commit either country to a free-trade agreement.

The agreement supplements the General Agreement on Tariffs and Trade (GATT); it does not displace it. The GATT, as presently constituted, does not cover all trade issues and covers investment issues inadequately. The framework agreement does not require Congressional approval.

The agreement's statement of principles includes recognition that:

--Continuing dialogue and frequent consultations concerning trade and investment matters are vital to the U.S.-Mexican trade relationship.

--It is desirable to resolve all disputes as soon as possible.

--Mexico's present status as a developing country give it certain rights and obligations under the GATT.

--There is a need to eliminate non-tariff barriers in order to facilitate greater access to the markets of both countries.

--Because trade has a special role in the development of border regions, there is a need for special cooperation on border trade matters.

--Mexico has made progress in liberalizing its trade regime.

Under the agreement's consultative mechanism, either country may request at any time consultations with the other country on any matter concerning bilateral trade and investment relations.

Consultations are to be held within 30 days of the request. Every effort will be made to resolve trade disputes at the working level. If resolution is not reached within 30 days, either party may seek other means of settlement, including referral to the GATT.

Consultations are to be held annually at the Cabinet or Subcabinet level to review the status of the bilateral trade and investment relationship. The agreement requires both countries to consider additional exchanges of statistical information.

In a side letter to the agreement, the two countries agreed to discuss several trade issues, including agriculture, within 90 days of the signing. In the agricultural consultations, the Mexican Government is expected to raise U.S. plant protection and quarantine requirements which restrict U.S. imports of various Mexican horticultural products, especially avocados.

U.S. Exports to Mexico

U.S. exports of horticultural products to Mexico fell precipitously following Mexico's 1982 financial crisis which was initiated by the fall in oil prices. Since 1982, Mexico's gross domestic product (GDP) has stagnated, wages and salaries have declined drastically, inflation has soared, and the peso has been devalued 30-fold.

The sale of U.S. horticultural products to Mexico climbed through the 1970's and early 1980's reaching an oil-fueled peak of $77 million in the fiscal year ending September 30, 1981. By fiscal year 1983, exports had fallen to less than $19 million, but have since recovered, gradually. In the recently completed fiscal year, U.S. exports of horticultural products to Mexico were $44 million. A large proportion of horticultural product exports to Mexico are destined for the border zone where demand is greater and market access for many items is freer than in the interior.

Access to Mexico's horticultural markets has improved greatly since Mexico acceded to the GATT in August 1986. Among the products no longer requiring import licenses are: cut flowers, tomatoes, onions, dates, raisins, strawberries, peaches, dried apples, orange juice, and grape must.1/ Despite the improved access, Mexico's depressed economy has precluded dramatic increases in U.S. exports.

U.S. Imports from Mexico

Mexico is the largest provider of U.S. horticultural product imports. In fiscal year 1987, horticultural imports from Mexico, excluding beer and ale, were $800 million, down from $869 million the previous year. The decline, attributable to unusually low prices for fresh vegetables, especially tomatoes, followed steady increases in the value of horticultural imports from Mexico during the rest of 1980's.

Mexico, as a developing country, is eligible to participate in the U.S. Generalized System of Preferences (GSP) which gives duty-free access to the U.S. market for selected agricultural and non-agricultural items. Many horticultural products are GSP-eligible. However, Mexico, because it does not meet the competitive need criteria of the program, is ineligible for GSP treatment on a long list of horticultural products that enter duty free from other developing countries. GSP-designated items accounted for over one-half of the value of U.S. horticultural imports (other than beer and ale) from Mexico in fiscal year 1987, but only about 7 percent were eligible to enter duty-free.

1/ See Horticultural Products Review, Jan. 1987, pp.2 and 28; April 1987, p.6; June 1987, p.2; and Aug. 1987, p.3.

NORTHERN HEMISPHERE DRIED FRUIT SITUATION

Raisins

Raisin and sultana supplies in the four major Northern Hemisphere producing countries--the United States, Turkey, Greece, and Mexico--are expected to decline seven percent in 1988. The reduction is due to a sharp drop in beginning stocks which more than offsets the anticipated slight increase in production. Raisin production in the United States should be up 14 percent to 262,088 metric tons (packed weight) due to reduced enrollment in the acreage diversion program. Fruit quality is reportedly excellent as ideal weather conditions coincided with the harvest and drying.

Sultana production in Turkey is expected to fall 4,000 tons below the 1986 level to 106,000 tons. The small decline was due to spring frosts and hail and to unusually hot, dry weather during the summer. While bunches and fruit size were small, favorable weather permitted the crop to dry without damage.

Prices to growers for new crop sultana raisins, early in the season, were 610 to 635 liras per kilogram ($675 to $698 per metric ton), somewhat above the government support price of 570 liras for number 9 sultanas. Most of the 9,000 tons of stocks carried into the 1987/88 season were booked for export.

Less than one-half of Turkish sultana exports in 1986/87 were destined for the European Community (EC). A decline of 7.6 percent in exports to the EC was offset by a doubling of exports to Switzerland--apparently a route for undercutting the EC minimum import price (MIP). Before Greece joined the EC, about 80 percent of Turkish sultana exports went to the EC. The unit value of exports to the Community in 1986/87 was $1,315 per ton compared to an average $848 per ton for all other destinations. Exports to traditional markets in Europe, the Middle East, and North Africa are subject to an $80-per-ton export tax. Exports to the Western Hemisphere and the Far East do not pay this tax. Raisins shipped in Turkish vessels qualify for a $7-per-ton transportation subsidy. Turkish ships, however, are not always available.

Greece suffered the most dramatic drop in production, with output falling 19 percent from the 1986 level to 56,000 tons in 1987. In 1985, production totaled 97,000 tons. The decline is due mainly to the rapid spread of phyloxera, a serious pest which is expected to affect production for many years to come. Low temperatures and excessive precipitation further reduced the 1987 crop.

A vine replacement program, financed by the EC and the Greek Government, has the goal of replacing two-thirds of the present sultana area in Crete with new, phyloxera resistant vines. The program will take 8 to 10 years to complete. New vines become fully productive after 5 years.

The minimum price to growers (MGP), of 171 drachmae per kg. ($1,219 per ton) for deliveries in September and October 1987, will increase gradually through the season, reaching 191 drachmae by August 1988. Processors will receive an EC subsidy of 67 drachmae per kg. ($478 per ton).

EC RAISIN SUBSIDY SCHEME
(Indicated currency per metric ton)

SEASON	MGP	SUBSIDY	NET COST OF FRUIT	GREEN EXCHANGE	NET COST OF FRUIT	DOLLAR EXCHANGE	NET COST OF FRUIT
	ECU	ECU	ECU	DRA/ECU	DRA	DRA/$	$
1981/82	1171.8	115.9	1196.5	61.45	73,520	57.03	1,289
1982/83	1331.7	361.4	1130.1	66.55	75,211	70.57	1,066
1983/84	1331.7	544.4	947.1	77.25	73,162	98.67	741
1984/85	1331.7	755.5	736.0	90.53	66,629	128.48	519
1985/86	1331.7	660.3	831.2	102.35	85,070	147.76	576
1986/87	1331.7	519.7	971.8	116.67	113,383	138.76	817
1987/88	1331.7	522.2	969.3	128.34	124,395	131.94	943

Note: Dollar exchange on December 31, except for 1987/88 which is November 12. Net cost of fruit makes allowance for processing losses which raises cost by 12 percent.

Most of the 10,000 tons of carryin stocks will be destroyed, used for animal feed, or distilled. In 1986/87, 97 percent of Greece's sultana exports went to other EC countries. Before Greece joined the EC in 1981, only about one-third of exports went to the EC.

Mexico's raisin production declined from last season's high point because of somewhat less favorable weather, and growers' decisions not to invest in vineyard care because of low prices for both raisin and wine grapes in 1986/87. Exports, destined primarily to the United States, but secondarily to Latin American countries, may be maintained near last season's level.

Prunes

The 1987 prune pack in the three major Northern Hemisphere producers--the United States, France, and Yugoslavia--is estimated at a record 253,750 tons (packed weight), up a remarkable 79 percent from 1986. The increase is mainly the result of a near record 204,750 ton pack in the United States, more than double last season's output. As a result, dried prune supplies in the three countries will be up by about 35 percent.

At 29,000 tons, prune production in France will be down 19 percent from 1986 and 10 percent below the previous 5-year average. The drop was normal following last year's large harvest. Overall, the quality of the 1987 crop is reported to be good. Because of newly bearing area and better yields, French dried prune production is projected to rise to 40,000 tons by the early 1990's.

The EC minimum price to growers (MGP) for prunes remains unchanged in French francs, but the dollar equivalent, because of differing exchange rates, is up 11 percent. The processing subsidy is up 16.5 percent in franc terms this season. Most French dried prune exports are destined to other EC countries.

1987/88	1,587	575	1,012	7.476	7,563	6.20	1,220

1/ Applicable to France, basis 66 fruit per kg. (60/lb.) 2/ Assumes no weight change in processing. 3/ Average for August of each year.

Dried prune production in Yugoslavia is expected to increase by about 68 percent in 1987 over last year's reduced harvest. The increase is primarily the result of a much larger fresh plum crop.

The complete production, supply, and distribution tables for raisins and sultanas and for dried prunes are given in the statistical section of this publication.

UNITED STATES DEPARTMENT OF AGRICULTURE
WASHINGTON, D.C. 20250

OFFICIAL BUSINESS
PENALTY FOR PRIVATE USE, $300

FIRST-CLASS MAIL
POSTAGE & FEES PAID
USDA-FAS
WASHINGTON, D.C.
PERMIT No. G-262

If your address should be changed _____ PRINT OR TYPE the new address, including ZIP CODE and return the whole sheet and/or envelope to:

FOREIGN AGRICULTURAL SERVICE, Room 4644 So.
U.S. Department of Agriculture
Washington, D.C. 20250

HOW TO SUBSCRIBE

Horticultural Products circulars are issued 12 times a year. They are available on a subscription basis for $20.00 in the United States or $30.00 mailed to foreign addresses.

To subscribe, send your check, payable to the Foreign Agricultural Service, to: Foreign Agricultural Division, Room 4644-S, U.S. Department of Agriculture, Washington, D.C. 20250. Only checks on U.S. banks, cashier's checks or international money orders will be accepted. NO REFUNDS CAN BE MADE.

HOW TO RENEW

You will receive a notification about 60 days before your annual subscription expires. To prevent a lapse in service, promptly return your renewal form and payment. **Inquires:** If you have a question about your subscription, write to the above address or call (202) 382-9445.
